PART 3

Using the 'outs' to calculate Texas Hold'em poker odds

Let's break this down:

We have already determined that you have nine 'outs'.

There are 52 cards in a deck and two of those are in your hand, leaving 50.

There are four cards exposed from the flop and turn, leaving 46 cards.

Your opponent is holding two cards, but we ignore those as our calculations in online Texas Hold'em poker are only based on the cards you can see and what could be left in the deck.

First calculate how many cards from the deck you can't see:

52 Cards in a deck – 2 Cards in your hand – 4 Cards dealt in the flop and turn = 46 Unseen cards

*Still ignoring what your opponent may be holding

The unseen cards are then split into winners and losers:

LOSERS 37 cards in the deck that will cause you to lose Clubs Diamonds Spades WINNERS 9 cards in the deck that will give you a win

YOUR ODDS 37 to 9 Your odds of getting the winning flush This simplifies down to 4:1 (or 20% for those that like to use percentages) In other words, you are 4 times more likely to lose this pot than you are to win it.

Common poker outs scenarios

To help you get to grips with the idea of poker outs, we've provided the outs and odds on some common scenarios you're likely to see at the table. Use this simple odds chart for calculating odds and probabilities while playing, especially when you are drawing and hoping to improve your hand.

It has basic hand odds given the number of "outs" after the flop or after the turn. These "outs" represent the cards you need to hit to make a better hand, such as turning a pair into three-of-a-kind, or filling a straight draw. You'll notice there's a big difference between having just one card to come, and two. For the example above – the flush draw – your chances go up to 35% from 20% if you have both turn and river to come.
